

F-35 Ultrasonic Liposuction Equipment

The equipment uses the strong ultrasonic heads to release 40,000Hz of powerful ultrasonic to vibrate fat cells, producing countless vacuum air pockets in and out of cells. This impacts the fat cells, making the inner cell membrane crack, so as to dissolve the triglyceride to be the glycerin and free fatty acid, then under the power of the RF wave at 0.5MHZ, excretes through the liver circulation. Finally the F35 uses the dynamic red photon and the oriented electrode to tighten the skin.

Functions:

- Cracks the cellulite, removing fat.
- Dissolves fat, drains the lymph nodes, tightens skin, enhances skin elasticity.

F-35 Ultrasonic Liposuction Equipment (Table model)

This cavitation machine applies a low frequency of 40KHz vibrating action to weaken the fibres that surround the adipocyte cells and releases the fatty acids. It uses mechanical, thermal, biological and sonophoresis effects to work on fat, so it can produce perfect slimming effect in a short time.

Features

- Non-anaesthetic.
- No bleeding or bruising.
- No side effects.
- Woundless, will not influence normal working conditions.
